

At Aperam, we know that our success is dependent on your confidence in using stainless steel. As the market leader in stainless steel, Aperam is committed to sharing our skills and expertise to ensure you have the knowledge and skills needed to make the most out of stainless steel.

A dedicated centre for stainless steel R&D

Aperam's dedicated Stainless Steel Research Centre is a one-stop-shop for all technical questions relating to the production and use of austenitic, ferritic, martensitic and duplex stainless steels. Here, customers have access to:

- Support in optimising their processes
- Devices for tool and part modelling
- Welding and forming support
- The latest grades offered by Aperam Stainless Europe

Located in our Isbergues production plant, the Research Centre is the heart of our global technical network that includes research centres across Europe and Brazil and working in partnership with several world-renowned universities

Achieving more through co-development

Helping you overcome your biggest challenges is at the heart of our business. As nobody understands these challenges better than you, Aperam is an adamant supporter of co-development. By listening to your demands and working in close collaboration, together we can develop the high-quality, innovative products you need to stay at the forefront of an always-evolving industry.

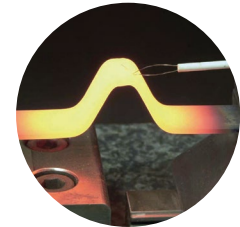

Our engineers assist you in the design and execution of new medium- to long-term projects. For example, in the automotive sector, where new environmental standards demand innovative new solutions, our team will work with you to find the best grade for your project. But the collaboration doesn't stop there. We'll help optimise your manufacturing process, evaluate how you can reduce costs, enhance the skills of your personnel, and provide your team with the technical training needed to succeed.

Although the content of this programme is geared for those working in production workshops or in Quality/Method/Process departments, we can adjust the offering based on your specific needs.

Our Equipments

Climatic corrosion chamber

Thermal fatigue bench

Hot corrosion SCR bench

Thermo-mechanical fatigue machine

Atelier Inox: unrivalled training, unlimited possibilities

Atelier Inox is housed in Aperam's production facility and flat stainless research centre in Isbergues, France.

The Atelier Inox 2.5-day introduction to stainless steel programme focuses on the versatility of our wide range of grades, with the aim of helping you identify the best possible solution for your needs. The programme includes opportunities to get hands-on experience with the grades, along with workshop visits. Topics covered include:

Corrosion Resistance

Welding

Forming

Stamping

Can't come to Isbergues? No problem! Aperam will bring Atelier Inox to you.

Ask us about organising a training on your premises.

Why wait? Join the hundreds of companies from around the world that have already made use of this one-of-a-kind opportunity.

To learn more about how your company can benefit from Atelier Inox's unrivalled training, contact us today.
