304L
(1.4307)

316L
(1.4404)

Now available up to
15 mm thickness
in 1500 mm width,
in coils & sheets

Extending the dimensional range

Continuous investment in manufacturing expertise and process improvement enables Aperam Stainless Europe to further expand its product offering.

The dimensional range of Aperam 304L (1.4307) and Aperam 316L (1.4404) now extends up to 15 mm thickness in 1500 mm width, available in both coils and sheets. As the only European producer offering this combination, Aperam broadens the possibilities for demanding applications while combining thick gauges with the quality, consistency and processing advantages of continuously rolled stainless steel.

Greater flexibility from stock to delivery

The availability of thick gauges in coil format creates new opportunities for manufacturers and service centres. Keeping coils in stock enables service centres to produce cut-to-length sheets according to customer requirements, helping optimise inventory while improving responsiveness and delivery performance.

"Thanks to our network of Aperam Service Centres, we can keep thick gauges in coil stock and produce cut-to-length sheets when they are needed. This enables us to respond faster to customer requirements while offering greater flexibility for project-specific and non-standard lengths," says **Benoît Van Hecke**, Head of Technical Customer Support | Commercial Team Capital Goods.
